Spirituality and frequencies

Self-optimization in resonance with everything that is

The importance of the water quality inside our bodies for health and performance is anchored in the consciousness of many people. Ideally, our body water is based on living, highly structured and constantly dynamically oscillating cell water. This makes it self-cleaning, stores energy and acts like a battery for life energy. However, due to the many modern influences to which our civilization is constantly exposed, our bodies hardly have the opportunity to enter this natural state of being. This is why knowledge of the processes inside our bodies is once again so important today. Because there are now various ways to counteract this constant energy withdrawal due to various disharmonious influences effectively and, above all, individually.

Capture individual frequency profiles and transmit them back in an optimized manner

Water under the influence of frequencies

An optimal body environment contains water, which naturally produces a liquid gel-like viscosity (a type of plasma storage) and an alkaline pH value. Therefore, considerations about effective energy generation outside of our body are closely linked to innovative water plasma research. The well-known water researcher Dr. Pollak from the University of Washington describes a fourth phase of water. This then forms a type of platform or network in which further

information can be stably stored using certain high frequencies (artificial or natural). High frequency can therefore produce harmful as well as health-promoting effects.

As soon as stable crystalline structures exist in our body water under the healthy influence of frequency, just as they are well-ordered in the natural EIBA®-Mac crystal emitter, which has stored the earth's natural evolutionary processes over millions of years, an internal transformation process begins.

But that's not all, because only now does the alchemy of life begin to take effect. The natural battery effect - i.e. the creation and storage of pulsating life energy in the body - can be further optimized by naturally high-vibrating frequencies from the EIBA®-Mac crystal (consisting of gallium arsenite GaAs). The EIBA®-Mac crystal emitter oscillates in natural rhythms - i.e. between the highest natural frequency ranges of our planet, i.e. between 43 and max. 78 GHz, i.e. unimaginably fast, billions of times per second! Only these ultra-high oscillation speeds in the biologically based gigahertz range make it possible to have a harmonious structuring and individually restructuring effect even in the interior of the cell.

Expansion of creative possibilities

This means that not only complex biophysical information from plants and nutrients can be stored and transferred stably in water using the Scan & Transfer program in the EIBA®-Mac, but also individual body information.

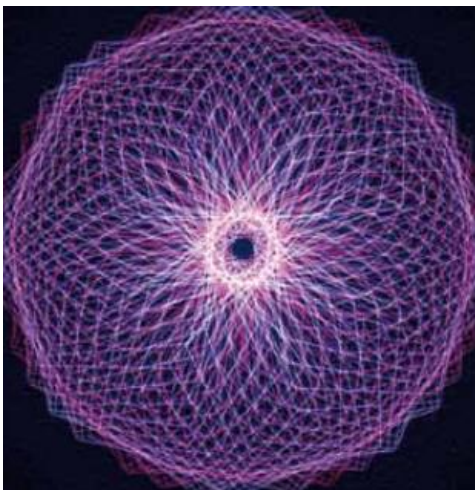

This is then inserted back in an optimized manner, i.e. into the storage-forming, permanently pulsating, high-vibrating individual water network structure in the body, which is made ready for reception by gigahertz vibrations. This achieves effective cell permeability and stimulates natural transformation processes.

What influences vitality, energy and youthfulness?

The body communicates primarily via electrical signals and therefore we optimize life processes, regeneration capacity, energy management, cell division and much more through this type of individual frequency music transmission of our drinking and body water. Our body needs the harmonious interplay of many different, complex vibration rhythms from low frequencies in the hertz range (e.g. the Schumann frequency) to megahertz (see our Tesla

oscillator EIBA[®] -Vita) and special gigahertz frequencies. GHz frequencies have so far only been generated technically and transmitted to us humans in a high-pulse manner via mobile phone communication, and it is precisely these that disrupt the natural communication channels inside the cell, which are specifically in the above-mentioned optimal gigahertz range of the cell interior water between 50-51.8 GHz.

Stable, active-dynamic processes that initiate a healthy type of plasma-based bio-life energy battery in the body itself only become active in the range between 64.5 and 65.5 GHz. The EIBA[®]-Mac crystal emitter contains this broad natural spectrum and the body can access it depending on its current and individual constitution, provided the crystal emitter is worn directly on the body. In this context, it is also wonderful to know that the telomeres, which are responsible for anti-aging, can grow back if the electrical body potential is high enough, meaning that a gradual rejuvenation of our cells is possible.

Harmonic electron cloud of the GaAs-crystal stimulates the upper energy centers

This even means that our cells can produce their own, super-high-vibration, high-energy water in crystalline form. The mitochondria then produce such a miracle power plant product in conjunction with the microtubules, and this can amount to up to a liter of water. These mitochondria act like turbines or rotors and rotate in our cells much faster than a Ferrari engine - provided the right frequency fuel is available. This current research also sheds light on special metabolic processes that occur in people who practice light nutrition.

Naturally protective high frequency spectra - a result of independent research

With the natural EIBA®-Mac crystal emitter, we now have access for the first time to the specific high frequency range - extended to the biological gigahertz range, on which the microtubules and also our own crystals in the pineal gland respond. Very important here: This high frequency is neither technically reproduced nor transmitted via an Internet connection, nor automatically "assigned" via a data cloud connection, but is generated by the rare GaAs crystals in the EIBA®-Mac crystal emitter itself and these come from a natural source. These differences to other frequency devices on the market are absolutely relevant because, firstly, the biologically valuable, individual DNA frequency data remains with the user alone and is not read or stored elsewhere. And secondly, the pulsating technical gigahertz frequencies of mobile communications can now finally be adequately counteracted. This enables the body to take the next evolutionary step, i.e. to learn to distinguish between these two types of high frequency in the GHz range and to deal with them effectively through individual self-regulation. This is exactly what is important in our time and is therefore trained with the EIBA®-Mac protection program.

Individual solutions are the right key

Today, more than ever, it is important to create an individually tailored basis in which self-healing is effectively possible, which can be directly influenced by impulses of oscillation, movement, energy, light and sounds. However, healthy, vitalizing vibrations are increasingly being disturbed and overlaid by the technical, high-pulse telecommunications frequencies. These also work with high frequency patterns as a basis, but are modulated completely differently and create disruptive interference that has been proven to interrupt brain cell communication. Even young people are increasingly experiencing poor concentration, word-finding difficulties, etc., which can even lead to Alzheimer's.

Many chronic illnesses, immune deficiencies, etc. are based on resonance superpositions of our individual frequency field with artificial electromagnetic fields in an environment that is full of smart devices. In this respect, the high-energy order patterns with a very stable structure - as contained in the natural GaAs crystal in the EIBA®-Mac - are a sensible and effective way of counteracting these influencing factors in a natural way or rendering them

harmless. By regularly wearing the EIBA®-Mac crystal emitters, the emotional heart-brain connection is individually strengthened and the balance of both brain areas is harmonized in order to optimally tune into the changed frequency conditions on our planet.

Self-optimization in resonance with everything that is

We know that in the cosmos everything is sound. Why it is so essential for us to build up high-vibrating energy water (according to current research, in particular the gigahertz range between 51 and 54 GHz) in our bodies and especially inside our cells, has another interesting evolutionary effect. Since our microtubules in the cells are tubular, they oscillate like tuning forks and make the - probably often out of tune - original code of our DNA sound again as an individual song. But only if they are surrounded by high-frequency water inside the cell. This happens due to the formation of standing acoustic wave formations and also sound waves via the liquid crystalline cell water inside these "internal sound tubes". This is why peoples who still live very close to nature also have a high level of spiritual development.

One of the most significant recent discoveries in Japan was that this individually created frequency "music" in our microtubules deep in our trillions of cells also transmits information that can be absorbed far beyond the cell and the body. Is this perhaps also a way in which we can tap into morphogenetic fields or certain dimensions of consciousness?

Everything in a healthy body is permeated by the harmonious music of the spheres - everything vibrates, sounds and sings an individual, fine, inaudible sound. As a result, with the EIBA®-Mac we gently and steadily resonate and enter into natural resonance with the foundations of life on our planet, into a rhythmic canon of life here and far beyond. Thus, every individual person with harmonized frequency spectra definitely causes greater effects in the space and time structure through their growing inner potential than we can imagine.
