

# High frequency fields

## Natural origin versus technically produced

*Rare natural occurrence: the gallium arsenide crystal*

### Ines Schwarz

In a world that is increasingly characterized by technical radio frequencies, the question arises: How can we protect ourselves from the negative effects without giving up the benefits of modern technology? Ines Schwarz, who suffers from electrosensitivity herself, is the owner of the family-run technology company EIBA® and has co-developed an innovative solution. This extraordinary frequency device uses natural, crystalline-organic high-frequency generators to protect the body from harmful influences and at the same time amplify frequencies that are beneficial to life. In this interview, she shares her experiences, explains the differences between technically and naturally generated frequencies and shows how her device benefits not only people, but also plants and animals. A fascinating insight into current possibilities and future developments in health and environmental technology.

**The Root:** Dear Ines, you have been a reader of our magazine for many years and are enthusiastic about a lifestyle close to nature. You worked for a well-known German technology company abroad for more than 20 years, particularly in the Arab Gulf States - with Dubai as a well-known high-tech metropolis. You have since returned from there and now live and work near Bad Hersfeld in a rural area. You co-developed a new type of frequency device that can scan frequencies and transmit them back in an individually optimized way. How did this come about?

**I**nnes Schwarz: Dubai today is a dazzling metropolis where the latest technical inventions are being integrated in record time, which is of course fascinating to experience on the one hand.

On the other hand, this rapid pace of implementation means that not all technical projects can be professionally checked for their impact on people and the environment. As a result - and unfortunately also here in Germany - the overlapping high-frequency fields of various emitters are causing widespread health hazards in both public and private areas. This massively decimates the energy levels of humans and animals. I experienced this myself: I developed electrosensitivity and the resulting illness. This forced me to look for optimal protective solutions for myself. Fortunately, there were international technology experts in my professional environment.

#### **The root: Which shielding methods have you tried?**

#### **100% shielding is not the measure of all things**

Ines Schwarz: After using various products/devices, I noticed after just a few months that constant frequency shielding also excludes the frequencies that are beneficial to health. In short, I no longer felt connected to everything, mentally and spiritually as if in a closed cocoon. Full shielding around the clock made me passive, I could no longer react actively to environmental influences. So I had to look for other ways to positively influence electrosensitivity. It is important to bear in mind that we move daily in dynamic, constantly changing wave fields that resonate with sunlight. Many positive evolutionary effects that arise from this complex wave cocktail for humans, animals and plants cannot yet be measured, only guessed at. The fact is that these fields contain and transmit a wide variety of information packets that interact with our perception centers in the brain. And that brings us to the influence of high frequency.

# Our body communicates at high frequency

## The root: Where does high frequency exist?

Ines Schwarz: Unfortunately, there is still a lot of uncertainty in this area. In principle, the frequency ranges used for 5G/6G etc. are not harmful. Only the way in which they are generated is harmful: that they pulsate and that something is modulated. This is because the 5G/6G frequency ranges are "coincidentally" precisely the communication frequency ranges that our body uses for its own internal information transmission at cell level.

Our body constantly produces these high frequencies itself in various organs (heart, brain, blood plasma, etc.). For this reason, our organism always listens as soon as it is exposed to these wave strengths. This is because our body expects biologically usable information for its upcoming regulatory processes - it is attuned to electromagnetic wave impulses in order to control energetic processes in the cells.

However, technical data is modulated onto the generated telecommunication frequencies, which our body can neither decode nor use. On the contrary, it starts to rattle like a computer that cannot start the regular program. As a result, important processes in the body are not carried out or are interrupted. This has a negative effect on our physical and mental state - the overall energy level is in a permanent downward trend.

## WhatsApp messages irritate the DNA of cells

Animals and plants are also visibly suffering from this, as the high-frequency waves carrying technical information (e.g. WhatsApp messages) massively irritate the body's processes, including DNA vibrations. After all, the DNA structures in animals are the same as in us, only the number of chromosomes differs.

## The root: The layman knows nothing about this. How did you find a better solution instead of full shielding?

## Natural gallium arsenite crystals

Ines Schwarz: By taking the next step in evolutionary history: The use of biologically active, crystalline-organic high-frequency generators. The gallium arsenite crystals, which have so far only been found in Utah and Siberia, offer the body a naturally generated, harmonious and wide-ranging high-frequency field from the outside. This is filled with biologically usable information: Self-sufficient dynamic wave profiles that are immeasurably complex. This information has been stored in these crystals over millions of years, during the development and evolution of life on our planet. Our body is smart when it has the choice of which frequency tones to listen to. It learns quickly and focuses on the natural content and closes itself off automatically and gradually to technically modulated frequency fields - it no longer reacts to wave profiles or information content that is biologically unusable for it.

## The root: You mean our body has to get used to it first, a kind of cell training?

Ines Schwarz: Exactly. It is a gradual process of promoting cell intelligence and thus adapting intelligently and proactively to changing environmental conditions. The fact that our body's biological communication frequencies have been technologically taken over or hijacked (as a carrier medium for synthetic, digital content) is something that has not yet happened in human development. Our immune system therefore has no reference to this and needs support.

These rare high-performance crystals, which contain a life-promoting natural frequency spectrum, help us to do this. There is already a lot of research on this, mainly from Russia. When I first became acquainted with this in an international project in Dubai Health Care City, I knew that there would be great opportunities for the recovery of people, animals and the environment. Many years have passed since then and we have now reached the stage of applied practice. This laid the foundation for the development of our EIBA® wellness devices here in Germany together with my husband and our small team of motivated engineers.

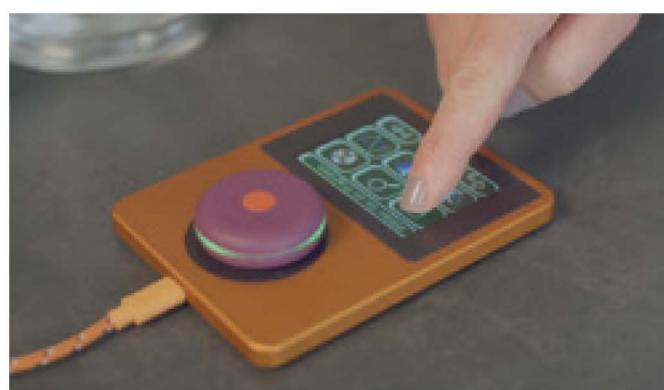

## The root: What distinguishes your frequency device from others?

Ines Schwarz: Technically generated frequencies in wellness devices mimic the biological frequency field emitted by humans. Due to the technical components currently in existence, they can only ever cover a certain frequency range from the life-supporting wave spectrum of our planet that naturally surrounds us. However, the entire human frequency spectrum ranges from the low frequency<sup>1</sup> (Hz) to the MegaHertz<sup>2</sup> (MHz) to the Gigahertz range<sup>3</sup> (GHz). But the measurable spectrum goes even further. Tibetan monks with levitation experience have even been able to measure selected terahertz frequencies<sup>4</sup> (THz).

## Healthy endogenous high frequency

Crystals and minerals, e.g. rock crystal, vibrate in the low-frequency range and are very helpful as they stimulate the body to form healthy, structured information fields - but they can also be manipulated! Our EIBA®-Mac frequency device contains unique, non-manipulable natural gallium arsenite high-performance crystals (GaAs crystal) which, as dipoles, permanently

*The EIBA Mac with integrated gallium arsenide crystal and program selection*

<sup>1</sup>With Primarily a physical pulse generator - the Schumann frequency is known at 7.83 Hz (approx. 8 oscillations/vibrations per second), which creates a connection to the earth and harmony <sup>2</sup>With millions of oscillations per second - important for active cell membranes and the energy balance - in case of illness it is below 70 <sup>3</sup>With billions of oscillations of electromagnetic wave formations per second (precise influencing of cell communication, DNA optimization, mental, spiritual-spiritual aspects) <sup>4</sup>With trillions of oscillations per second.

generate a natural oscillation in the demonstrably healthy high-frequency gigahertz range up to 65.5 GHz! This is precisely the range that makes the water and blood plasma molecules in the body and our DNA literally dance and pulsate/vibrate individually. In this way, our body independently and permanently generates dynamic, healthy life energy via the body water and blood plasma inside the cells. Water research with Prof. Pollack (University of Washington) has analyzed this effect of EZ water<sup>1</sup> in the body very well. Our body is actually a natural free energy generator, as long as its body fluids vibrate in the high frequency range of 65.5 GHz.

In addition, all our glands, especially the pineal gland (perception) and the hippocampus (memory), work better the higher the oscillation/vibration of the cerebrospinal fluid. The millions of magnetite crystals in our cerebral cortex are able to retrieve and individually utilize the information packets fed in by the biophotons in the GaAs crystal, especially the light information from the solar plasma ejections, which are currently gaining strength again. We also have many other crystalline formations in our body, each of which has an individual vibration level and therefore performs storage and transformation tasks.

#### **The root: How does this all relate to Edelschungit?**

#### **Gallium arsenite crystal in combination with shungite**

Ines Schwarz: When we deal with the topic of transformation or the gradual transmutation from the physical-material carbon corporeality to the high vibrational crystalline structure to which we are evolving, the basis should be an intact structure that is present in the entire cellular space, which is based on fullerene structures as generated by the known noble nuclei. Building on this, higher vibrational wave formations can then be imposed by the GaAs crystals.

The natural GaAs crystals<sup>2</sup> are already being used in space research - in the USA and Russia, astronauts are given extensive vibrational support to stabilize and individually optimize internal cellular processes during their stay in space, as well as to maintain bone density due to restricted mobility.

#### **Areas of application of the gallium arsenite crystal**

Humans possess information packages, particularly in their energetic, non-physical DNA strands, which cannot yet be permanently accessed for self-healing and further development. These very high-vibrational areas in our cells require the appropriate triggers, which we can initiate with the EIBA® Mac crystal so that high-frequency structured and then individualized drinking water is created. The individualization of our drinking water is therefore the supreme discipline of water treatment. Our heart also plays an important role here, as it is itself a high-frequency organ<sup>3</sup>, which can control and realign the entire communication network in the body through various frequency influences.

# **The heart is a high-frequency organ**

Moscow's Pushkin Square with German oak trees

The 7 retrievable frequency impulses, which are emitted from the GaAs crystal via the EIBA®-Mac base station, activate these holistic processes individually in a natural way. We have deliberately designed the EIBA®-Mac as a mobile 'wearable' suitable for everyday use, so that you can have a versatile helper at your side in the office, at home or when traveling.

#### **Absorbing plant vibrations**

#### **The root: How can your frequency device be used for plants in addition to water treatment?**

Ines Schwarz: Not only the consumption of plants, but also the evolutionary stored plant information interacts with us.

Gemmotherapy<sup>4</sup> as well as wild herbs show amazing results. We do not need to collect large quantities of tree buds or rare wild plants. It is a much more loving approach to simply read/scan and store the living bud information directly on the tree or healing rare plant leaves without extensive harvesting using the GaAs crystal in the Scan&Transfer program of the EIBA®-Mac. And to transfer them optimized to the body directly, to structured water or to neutral globules for later use<sup>5</sup>. In this way, we are once again beginning to decode the many as yet undiscovered secrets and messages from nature in a completely new alchemical approach and to use them in an inspired way.

The biophoton currents emitted from the GaAs crystal create an ideal high-frequency communication antenna that enables us to communicate consciously and purposefully with our environment. Communication takes place via direct quantum entanglement, so that so-called "spooky effects"<sup>6</sup> are also possible. I recently heard from a friend in the USA that she used our EIBA® Mac device in the scan program to scan her tree (trunk and leaves) in the garden with the crystal and transferred this information to her own drinking water for several days. She also gave the tree this informed water to drink. As a result, she penetrated deep into the tree's consciousness during meditation and a two-way level of communication was created.

#### **Goodbye aphids**

Aphids on my water lily disappear quickly when I scan the plant leaves with the GaAs crystals and simultaneously transmit the harmonized information back to the plant via the informed irrigation water. Seedlings also love the information packets from our planet's GaAs crystal frequency library. The scientific experiments by Ciba-Geigy employees on reactivating the genetic primeval code in plants via certain high-frequency influences inspired us to think further and research the activation of all 12 strands of our DNA.

<sup>1</sup>EZ = Exclusion Zone - EZ water = exclusion zone water = water in the 4th aggregate state is gel-like, between liquid and

<sup>2</sup>For the sake of completeness, I would like to mention that artificial GaAs crystals are now available which, due to their almost unlimited storage capacity and high value, have so far been used almost exclusively in space satellites for information storage and ultra-fast transmission <sup>3</sup>See the still relatively unexplored 5th ventricle - watch the video by Ines Schwarz on YouTube: <sup>4</sup>Bud medicine <sup>5</sup>We also run creative workshops with owners of our devices

<sup>6</sup>How to influence remotely

## Stimulating the growth of trees

**Root: To what extent can the crystals used in EIBA®-Mac also be used to stimulate the growth of trees?**

Ines Schwarz: Yes, there was a very interesting experience at Pushkin Square in Moscow five years ago: the large oak trees in the newly planted avenue, which had been purchased at great expense from a German nursery, simply wouldn't sprout in the spring. Everything possible had been tried, the soil was proven to contain all the necessary nutrients. And yet something specific seemed to be missing. It could not be determined using the usual measuring methods (soil and air). In the meantime, the project budget had been used up. Finally, they remembered a research team from the University of Novosibirsk, which had already published several papers on the spectacular effect of transmitting individually tailored frequency information packages in agriculture. For example, in pest control, i.e. for natural plant strengthening.

Without further ado, the Moscow city gardener flew to Germany and scanned the original home soil of the oaks with the GaAs crystals in just a few minutes under the astonished gaze of the nursery staff. The recorded information spectrum of the soil was then transferred to the irrigation water of the oaks on Pushkin Square in Moscow. As the people there were still skeptical, they only started watering a few trees to observe the effect. A few days later, the people in charge were quite astonished, as all the trees began to sprout like spring just in time. Obviously, all the trees - even those separated by a wide avenue - were not only physically exchanging creative information with each other, but also via the morphogenetic field or hyperspace.

### **The root: What about its use in animals?**

Ines Schwarz: Animal lovers will notice that the naturally emitted frequency fields of these high-vibration crystals are not placebo effects. Whether dogs, horses or cats, they all like to be stroked or treated with the crystals. Through the crystal applications, the DNA level of the animals returns to the original, genetically predisposed, healthy principles of order, so that natural behavior and self-regulation find unhindered individual expression again.

### **The Root: Would you like to give us a brief summary?**

Ines Schwarz: It is not the quantity of frequencies, but their individual accuracy of fit and structure that are the perfect key to gradually becoming self-sufficient and stable and unfolding our full potential.

### **The Root: Thank you very much for the informative interview.**

*Interview conducted by Michael Delias*

## EIBA®-MAC

The revolution among frequency devices  
**Individual protection and mobile energy companion**

### What does EIBA®-Mac do?

- Reorganization of disharmonious structures through individually required information supply at the DNA level
- This is the supreme discipline, i.e., hexagonal water structuring plus individualization
- Trains the immune system individually adapted
- Individual compensation for the effects of negative electromagnetic fields
- Increases energy levels
- Optimizes mental resilience
- Natural anti-aging
- Rapid relief for skin problems

### ADVANTAGES of frequency applications with the EIBA®-Mac

- No habituation effect due to individually optimized retransmissions, i.e., compensation for missing life-promoting frequency spectra
- Easy application directly on the body or via information in drinking water
- No transmission of technically generated fixed frequencies
- No app and no cloud or Internet connection for the security of personal health data
- No wear and tear on the crystals
- Suitable for all ages

**Development and production of innovative solutions for stimulating and potentiating human potential on a mental and physical level – since 2013**
